How to Create a Deal in Marketplace Pipeline

docs.wetransact.io/how-to-create-a-deal-in-marketplace-pipeline

Purpose

Create a deal in Marketplace Pipeline so it shows up on your Deals board and can be registered with Microsoft for co-sell.

Before you start (required checks)

- **Partner Center must be connected.** You should see *"Connected as [Company name]"* under the page description. The connection must be done by a user with the **Global Admin** role in Partner Center. Without it, you cannot create deals.
- Have this information ready: customer **country** and **company name**, **deal amount**, **expected close date** and **deal owner**.

Three ways to create a deal

- **Option A --> From a lead:** accept a lead in the Leads tab.
- **Option B --> Add manually:** create one deal from scratch.
- **Option C --> Bulk upload:** paste or upload several deals at once.

🟣 Option A --> Create a deal from a lead

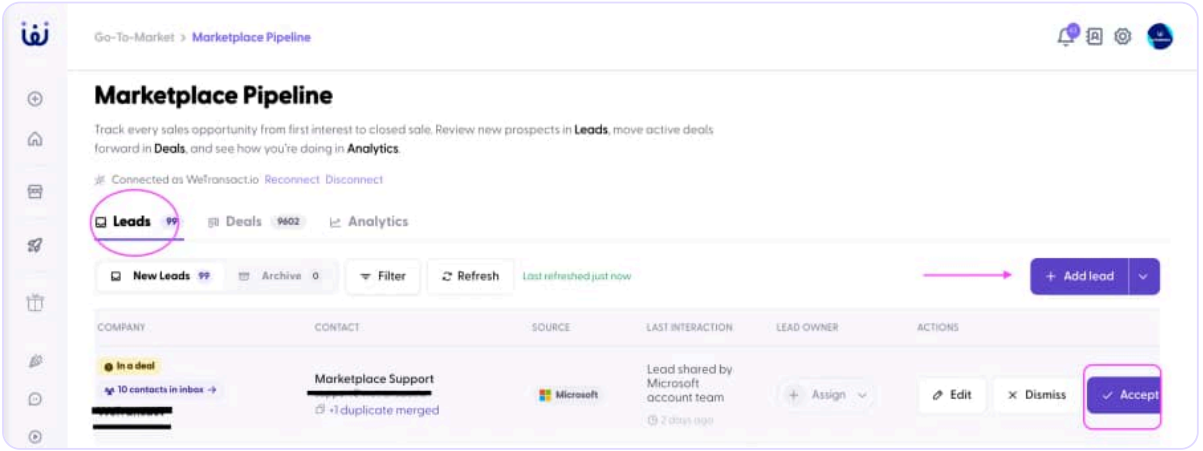

Step 1. Open the Leads tab

Go to **Go-To-Market** → **Marketplace Pipeline** and open the **Leads** tab.

Step 2. Review and accept the lead

- Check the **Company**, **Contact**, **Source** (e.g. Microsoft) and **Last interaction**.
- Optional: assign a **Lead owner** with **Assign**.
- Click **Edit** to correct the lead details if needed, or **Dismiss** if the lead is not relevant.
- Click **Accept** to move the lead into your deal pipeline.

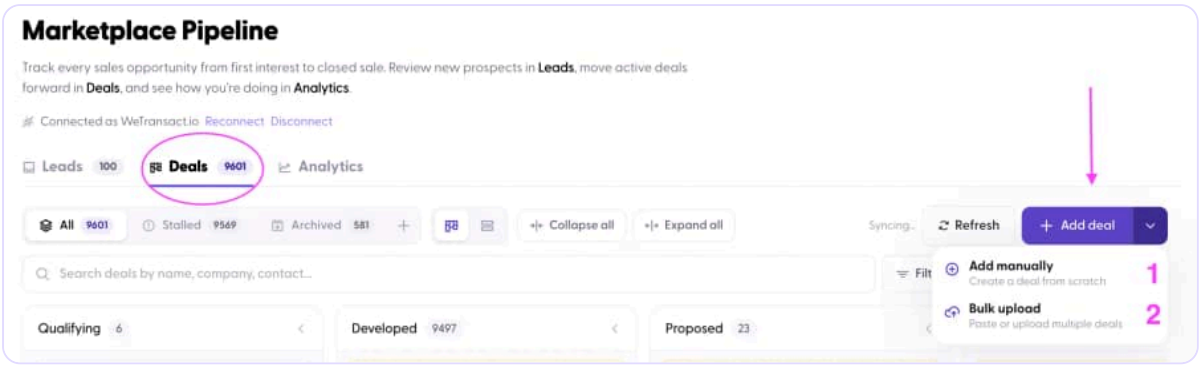

Important: if the lead shows the **"In a deal"** tag, check the Deals tab first to avoid creating a duplicate deal.

🟣 Option B --> Add a deal manually

Step 1. Open the Add deal menu

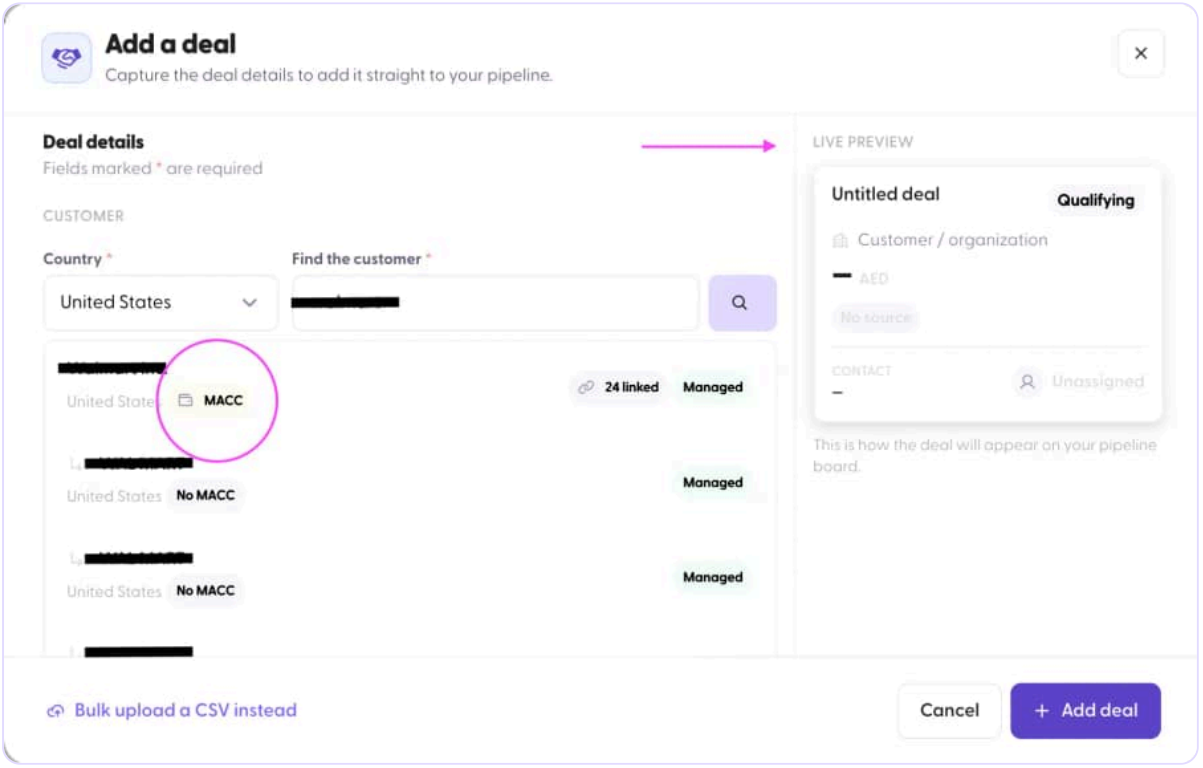

In the **Deals** tab, click the arrow next to **Add deal** and select **Add manually** (create a deal from scratch).

Step 2. Find the customer and fill in the deal details

- Select the **Country** (required).
- Type the customer name in **Find the customer** (required) and click the search icon.
- Select the right record from the results. Each result shows **MACC** or **No MACC** (whether the customer has a Microsoft Azure Consumption Commitment), the number of **linked** entities (e.g. "24 linked") and the **Managed** tag.

Tip: when several entities match, pick the one with the **MACC** tag if the deal should count toward the customer's MACC. MACC data comes from Target Customer data.

Fill in the following deal details:

- Website (optional)
- Deal name
- Close date

- Deal amount and currency
- Product listing(s)
- Contact details (customer's full name, email and phone). You can add more than one contact.
- Deal source and deal owner

On the right, the Live Preview shows how the deal will appear on your pipeline board.

Once everything is filled in, click **+Add deal**.

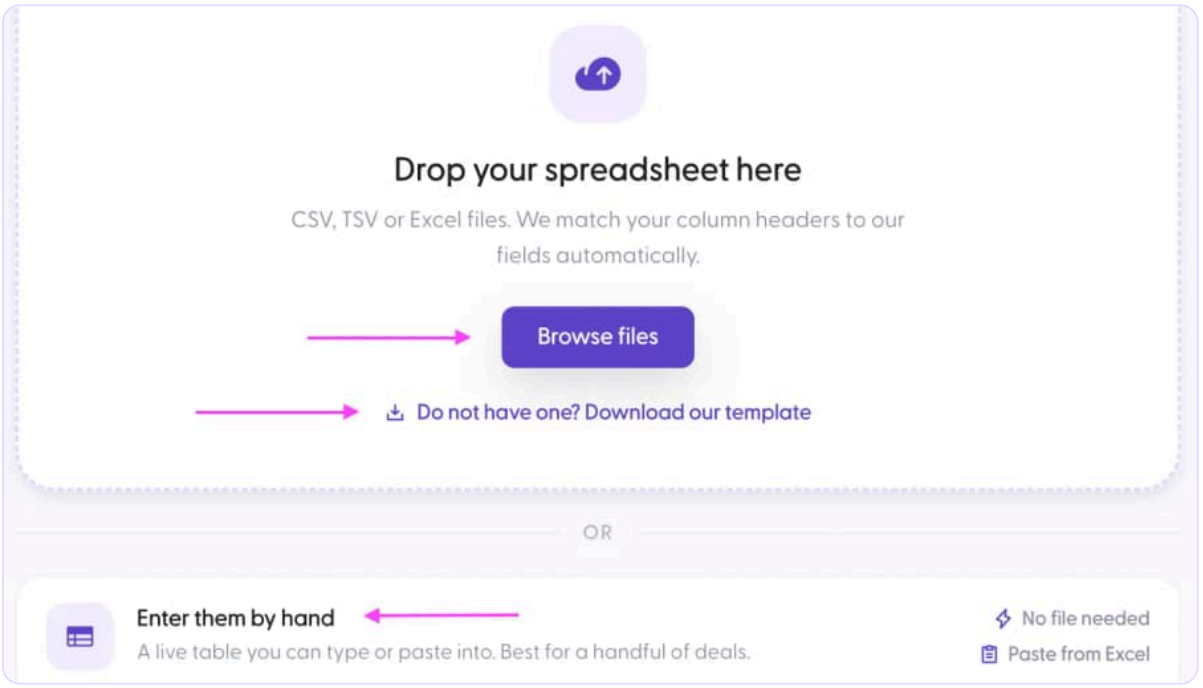

🟣 Option C --> Bulk upload several deals

Step 1. Open Bulk upload

Click the arrow next to **Add deal** and select **Bulk upload**. You can also click **Bulk upload a CSV instead** at the bottom of the Add a deal window.

Step 2. Add your deals

- **Upload a file:** drop your spreadsheet or click **Browse files** (CSV, TSV or Excel). Column headers are matched to the fields automatically.
- **No file yet?** Click **Do not have one? Download our template**, fill it in, then upload it.
- **Enter them by hand:** a live table where you can type or use **Paste from Excel**. Best for a handful of deals.

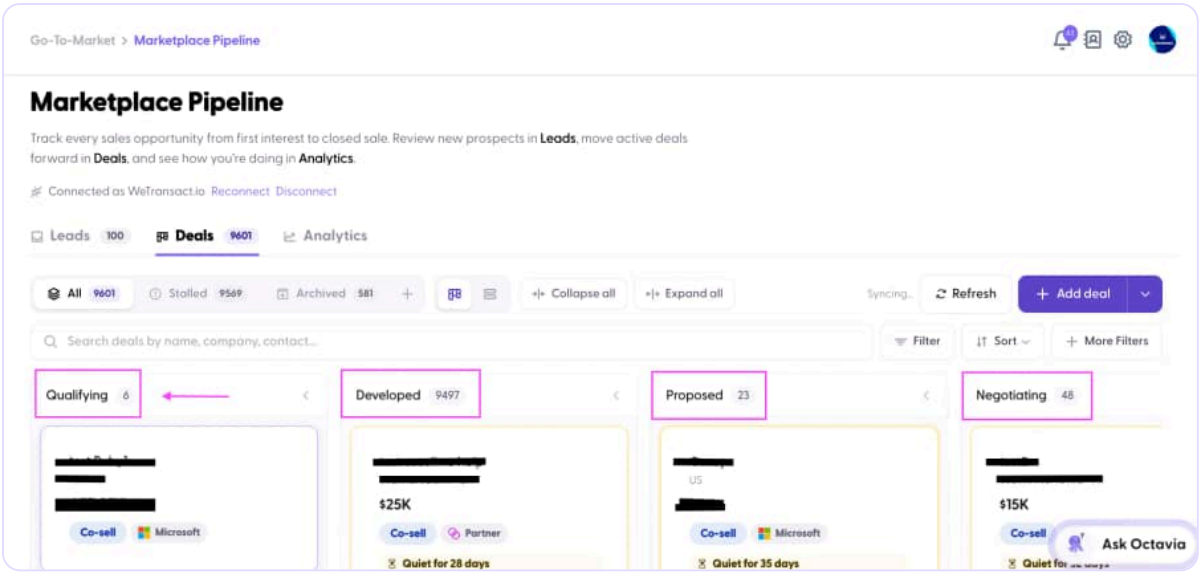

After the deal is created

Step 1. Find the deal on the board

New deals appear in the **Qualifying** column.

Deals move through these stages: **Qualifying** → **Developed** → **Proposed** → **Negotiating** → **Closed Won**.

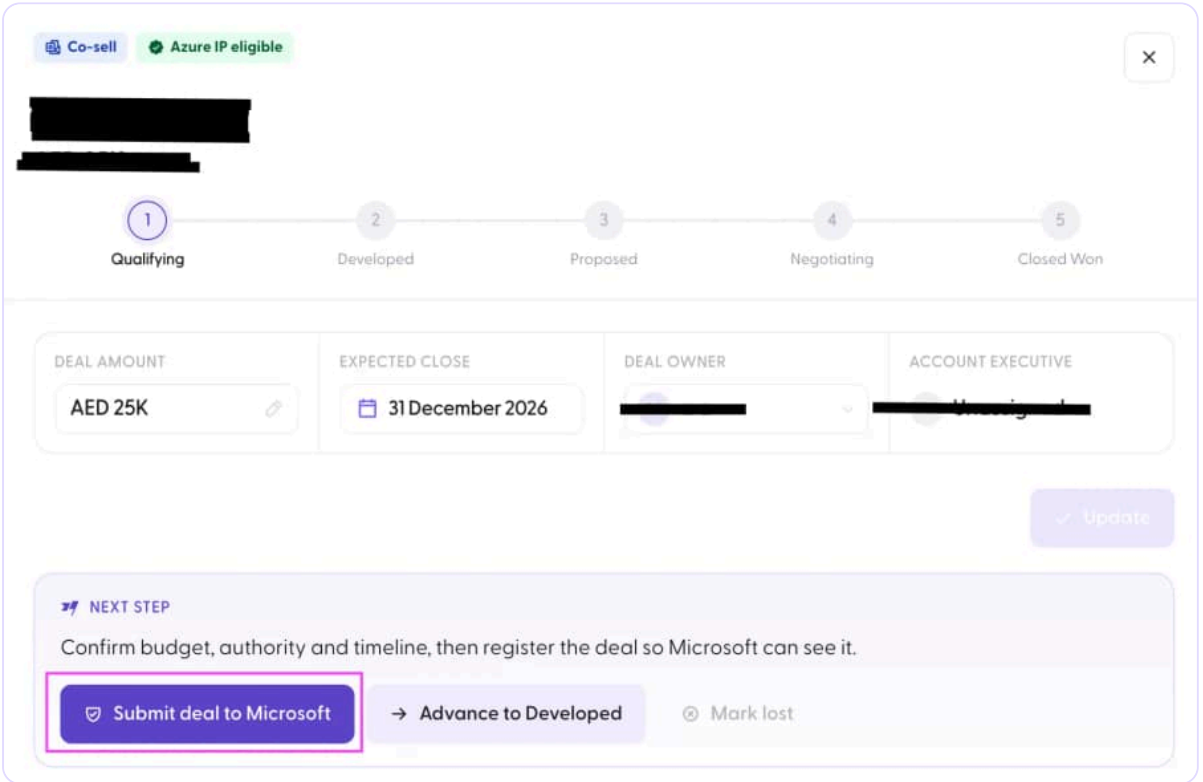

Step 2. Open the deal and complete the key details

Click the deal card. Review and update **Deal amount**, **Expected close**, **Deal owner** and **Account executive**, then click **Update**.

Step 3. Submit the deal to Microsoft

- Follow the **Next step** box: confirm budget, authority and timeline.
- Click **Submit deal to Microsoft** to register the deal so Microsoft can see it.
- Other actions: **Advance to Developed** to move the deal to the next stage without submitting to Microsoft, or **Mark lost**.

Important: double-check the customer, amount and close date before submitting, as the deal becomes visible to Microsoft.

From the deal view, you can also edit the Primary Contact (email and phone), view the Deal Details, log activities and add internal notes.
