Marketplace Pipeline: What You'll Find in Leads and Deals

docs.wetransact.io/marketplace-pipeline-what-youll-find-in-leads-and-deals

🟣 What is Marketplace Pipeline?

Marketplace Pipeline is the single place where sales can consume everything related to Microsoft Marketplace: leads and deals, in one view.

It is not meant to replicate the Partner Center experience. Partner Center remains the system of record; Marketplace Pipeline brings marketplace-related information together so sellers don't have to chase it across tools.

Reminder: to get Marketplace Pipeline working properly and to be able to create deals, Partner Center must be connected. This connection has to be done by a user with the **Global Admin** role in Partner Center.

🟣 Video walkthrough

🟣 Leads

The Leads section is where you find all prospects related to the marketplace. They come from three sources:

- **Microsoft-led:** leads shared by Microsoft sellers, or generated on the Microsoft Marketplace.
- **WeTransact-led:** Stellar leads.
- **Self-sourced:** leads from your own CRM that are related to a partner deal (Crossbeam) or to a Microsoft customer. Use **Create a lead** to add them.

🟣 Deals

The Deals section shows marketplace deals together with the customer's MACC.

Where the MACC data comes from: MACC and customer information in Deals is based on Target Customer data.
