

CSP Private Offer

docs.wetransact.io/csp-private-offer

CSP Private Offer is created by an ISV for a **Cloud Solution Provider (CSP)** partner instead of directly for the end customer. The CSP then resells the solution to its customer.

Key characteristics

- ISV negotiates with the CSP partner.
- CSP purchases via Marketplace and resells to end customers.
- Designed for indirect/channel sales motions.
- Supports CSP business models that Private Plans do not support.
