

How to action admin consent requests?

docs.wetransact.io/how-to-action-admin-consent-requests

Actioning admin consent requests allows a Global Admin to review and approve application permission requests, ensuring secure access to organizational data while maintaining compliance and control. Please follow the steps below:

Head to entra.microsoft.com and log in

● Click on Expand Applications section

Click on Enterprise applications

The screenshot shows the Microsoft Entra admin center interface. The left sidebar contains navigation links: Overview, Users, Groups, Devices, Applications, Enterprise applications (selected), App registrations, Protection, Identity governance, External Identities, Show more, Protection, Identity governance, Verified ID, Permissions Management, and Learn & support. The main content area displays the 'Welcome to Permissions Management' page for WeTransact. It includes a search bar, a 'Home' link, and a 'Welcome to Permissions Management' heading. Below the heading is a description: 'Discover, remediate, and monitor multicloud permission risks. Get multi-dimensional view of your risk by assessing identities, permissions, and resources. Automate least privilege policy enforcement consistently. [Learn more](#)'. There are three buttons: 'Try for free', 'Buy now', and 'Launch portal'. A large graphic of a blue cloud with a yellow shield is centered on the page.

Click on Admin consent requests

The screenshot shows the Microsoft Entra admin center interface. The left sidebar is the same as the previous screenshot. The main content area displays the 'Enterprise applications | All applications' page for WeTransact. It includes a search bar, a 'Home' link, and a 'Enterprise applications | All applications' heading. Below the heading is a description: 'View, filter, and search applications in your organization that are set up to use your Microsoft Entra tenant as their Identity Provider. The list of applications that are maintained by your organization are in [application registrations](#).' There are three buttons: 'New application', 'Refresh', and 'Download (Export)'. A search bar is present with the text 'Search by application name or object ID'. Below the search bar are two filters: 'Application type == Enterprise Applications' and 'Application ID starts with'. Below the filters, it says '89 applications found'. A table lists the applications with columns: Name, Object ID, Application ID, and Hc. The table contains 10 rows of application data.

My Pending All (Preview)

When users try to access an application but are unable to provide consent, they can send a request for admin approval. Admins can control which applications your organization approves. Configured reviewers will be able to evaluate their pending consent requests in the "My Pending" queue. Global administrators, Application administrators, Cloud application administrators, and Global readers will be able to see all pending, expired, and completed consent requests in the "All" queue. [Learn More.](#)

Search by app name

Help

Select an application to review who requested access. After selecting an application, you will be able to approve, block, or deny the admin consent requests for the selected application.

Approving the application requires you to review the application's permissions and grant admin consent. Granting admin consent to the application will add it to your tenant and all users will be able to access it unless you restrict access to the application.
