

How to add users in the WeTransact Portal?

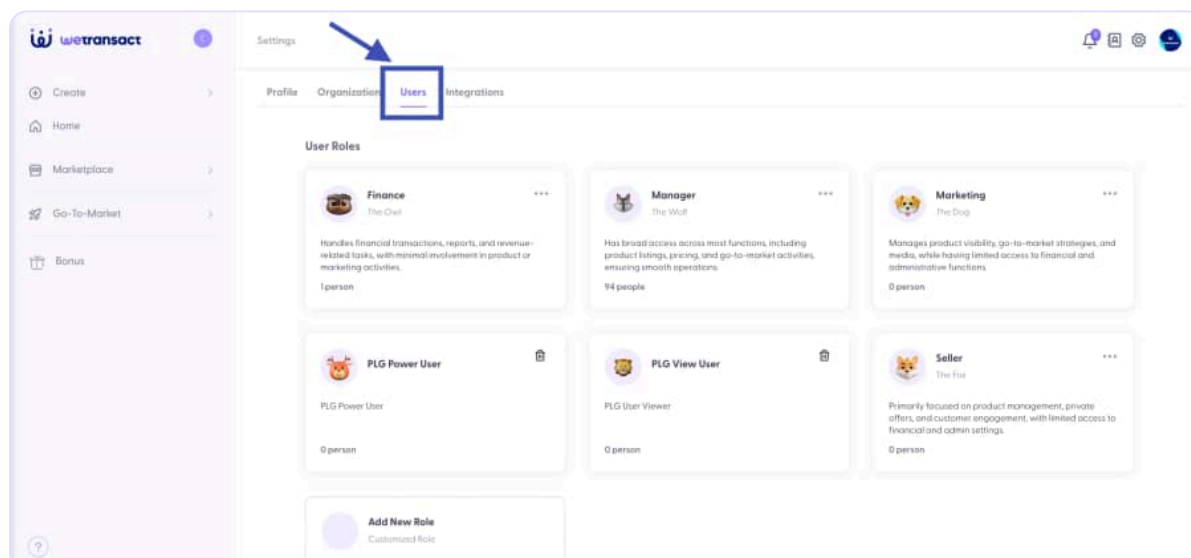

docs.wetransact.io/how-to-add-users-in-the-wetransact-portal

Adding users in the WeTransact portal allows your team members to access the platform, collaborate on offer management, and integrate with Partner Centre for streamlined Marketplace operations.

Click on settings.

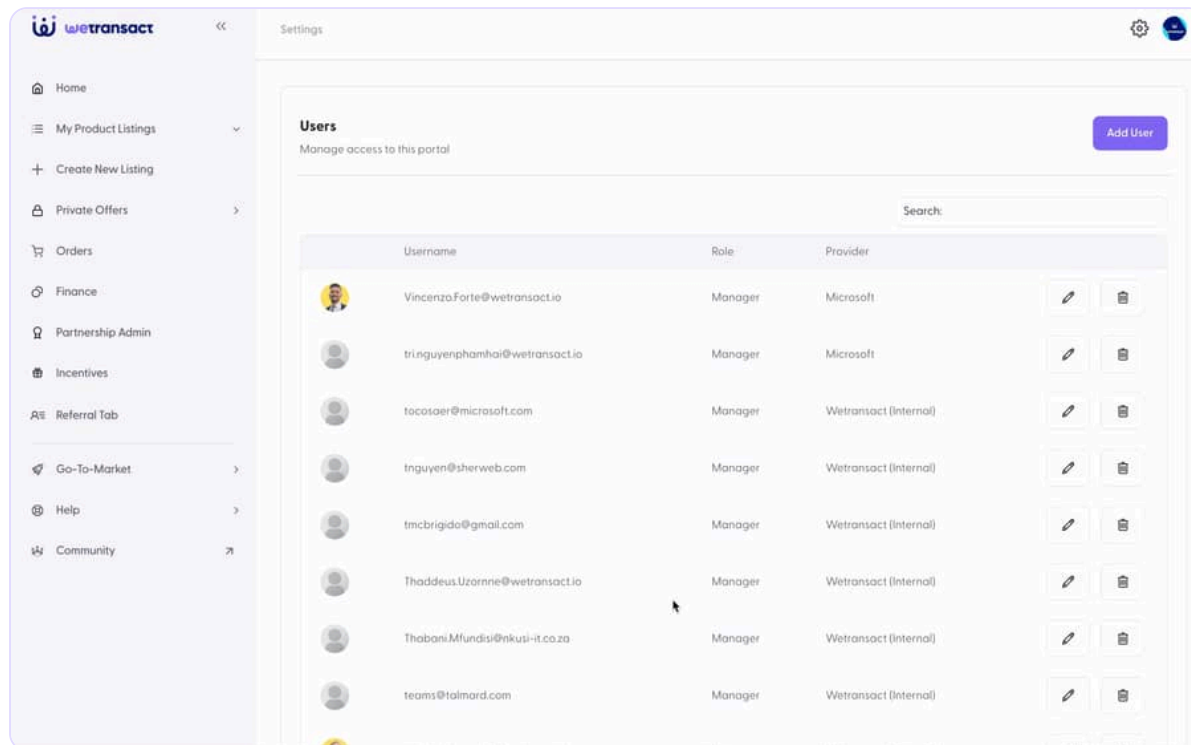

On the settings page, select 'Users' section.

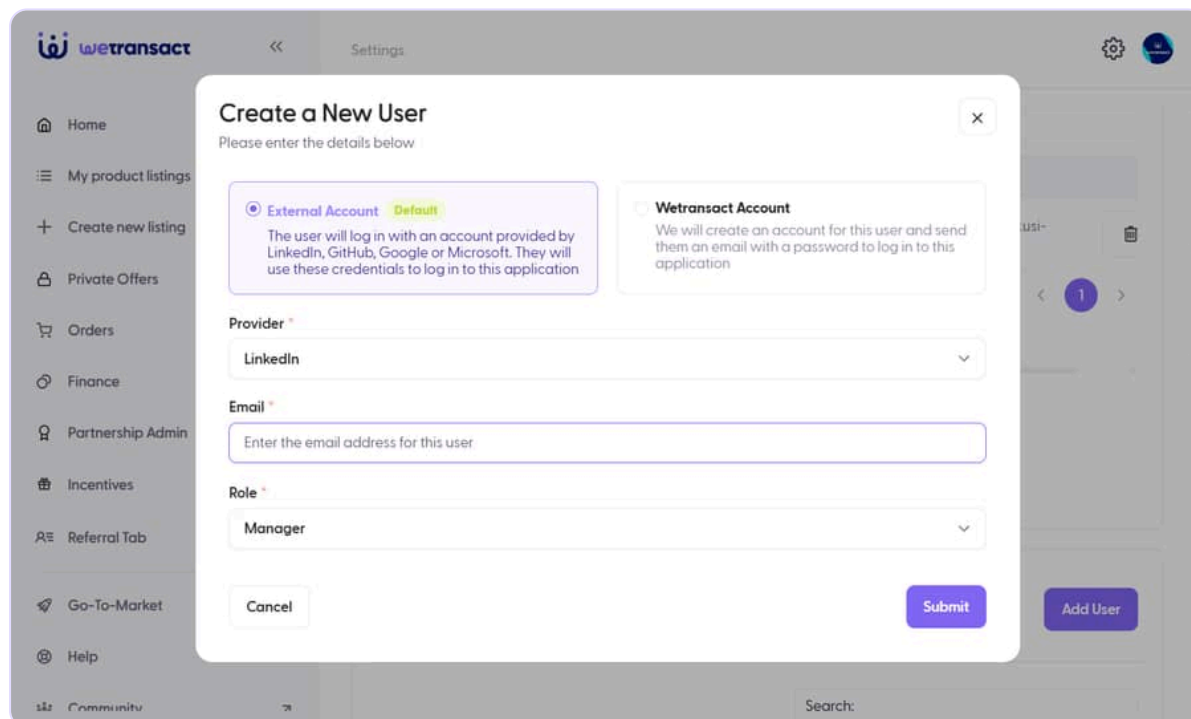

● Scroll down to click 'Add User', a pop-up will appear with two options: 'External Account' and 'WeTransact Account'. Click on 'External Account' to proceed—this will activate SSO login.

Under the 'External Account' section, you can assign SSO login credentials for yourself and other users. Supported SSO providers include Microsoft, LinkedIn, Google, and GitHub.

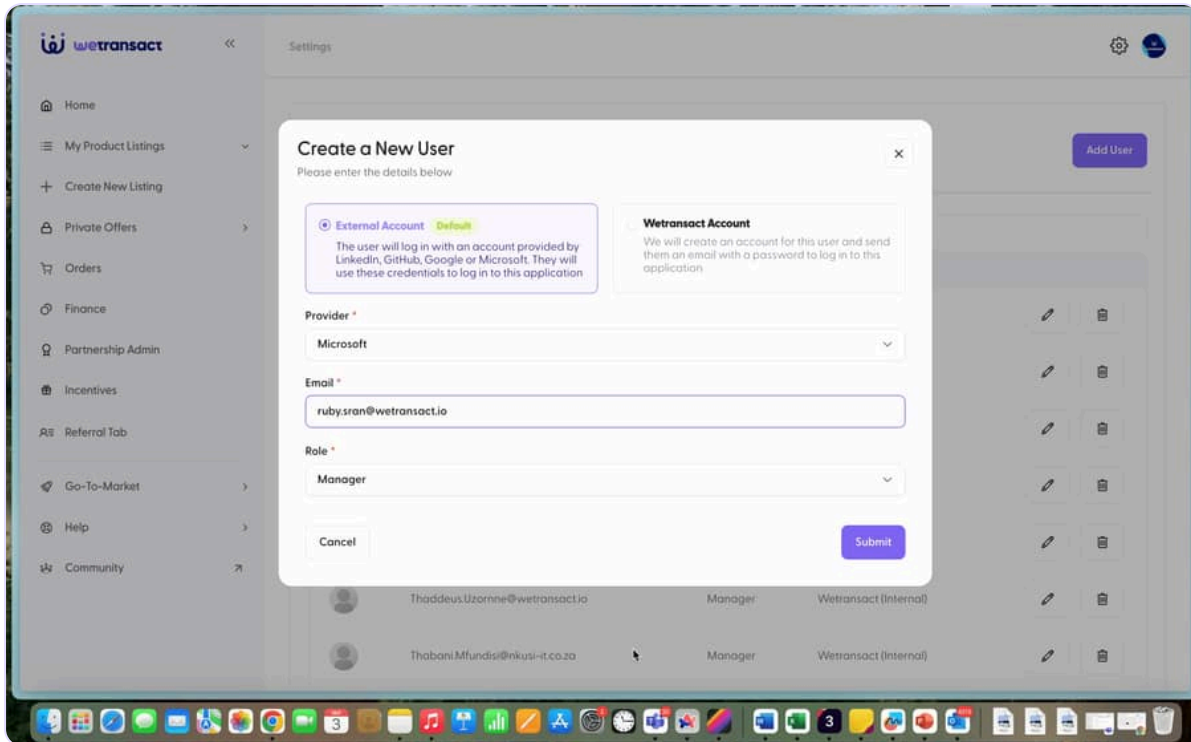

● Add the email address

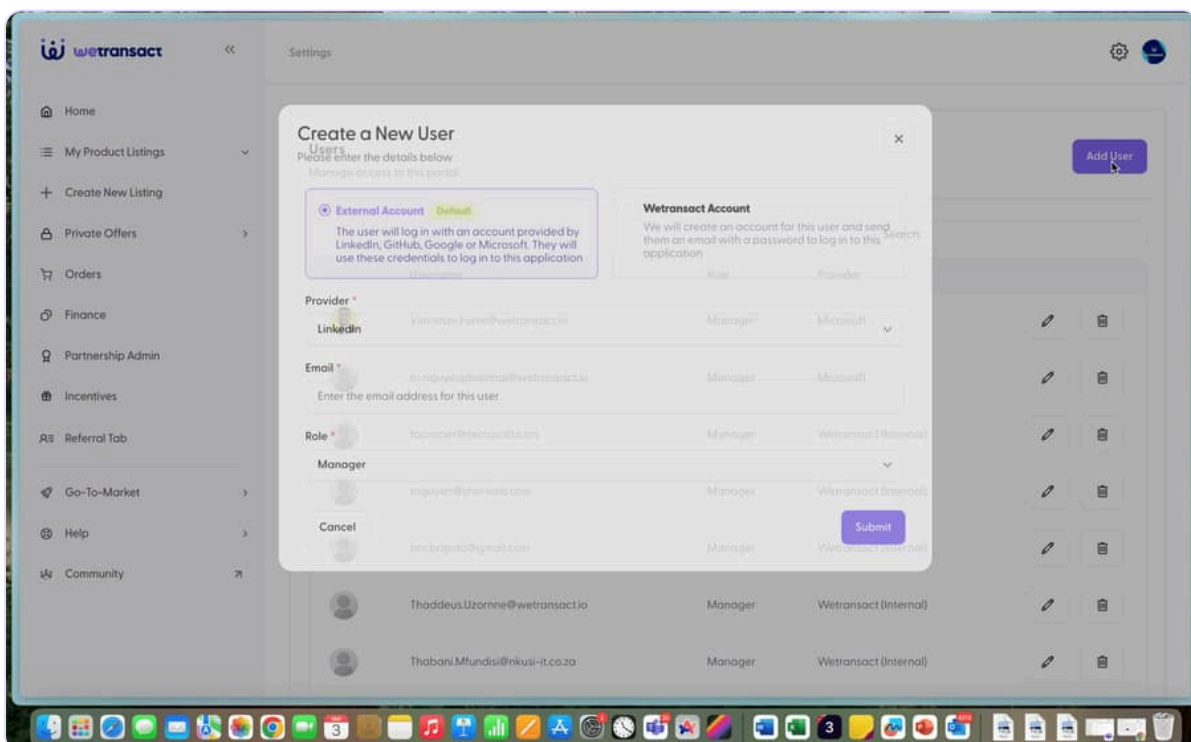

● Click on Role

You can select Seller, Finance, Marketing and Manager, and then submit it.

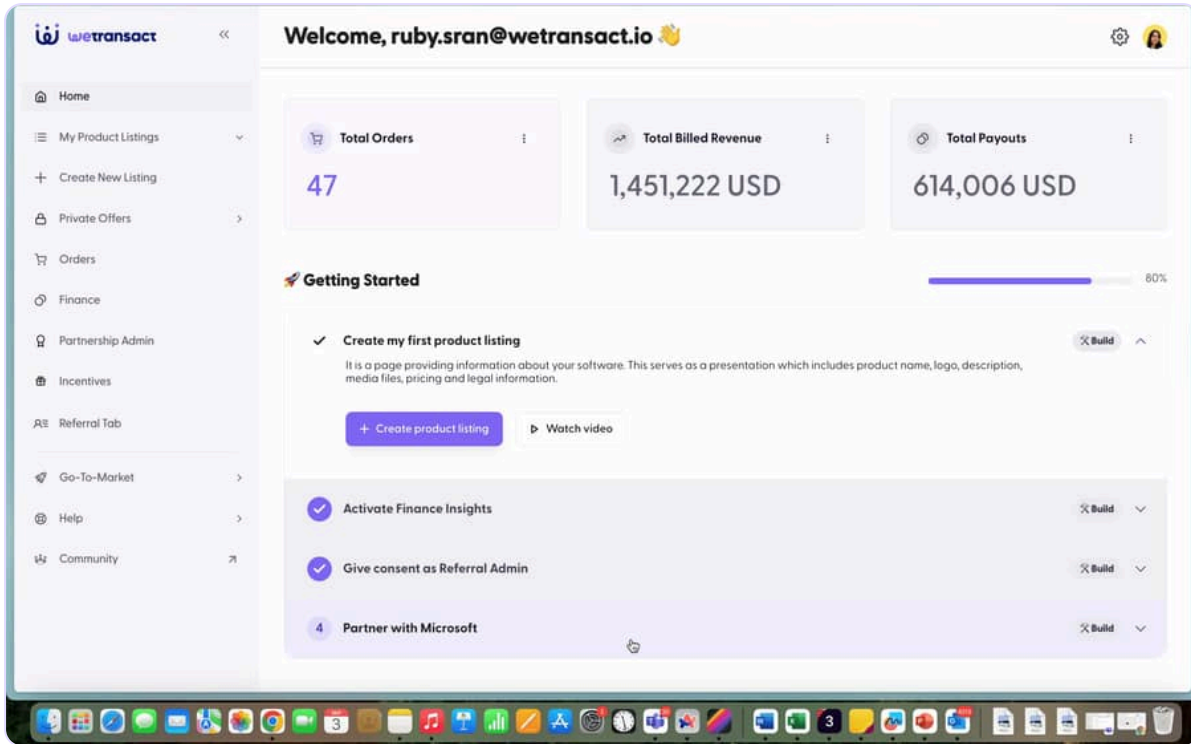

● If you do not want SSO and want to log in with a password, add the user under 'WeTransact Account' options.

Select the WeTransact account and enter the email. Select the preferred role, and submit. You will receive a temporary password to your registered email.

● Change Password

Use the temporary password to log in to the WeTransact portal. Once logged in, navigate to your user profile under 'Settings' and update your password.
