How to add a profile as the billing owner

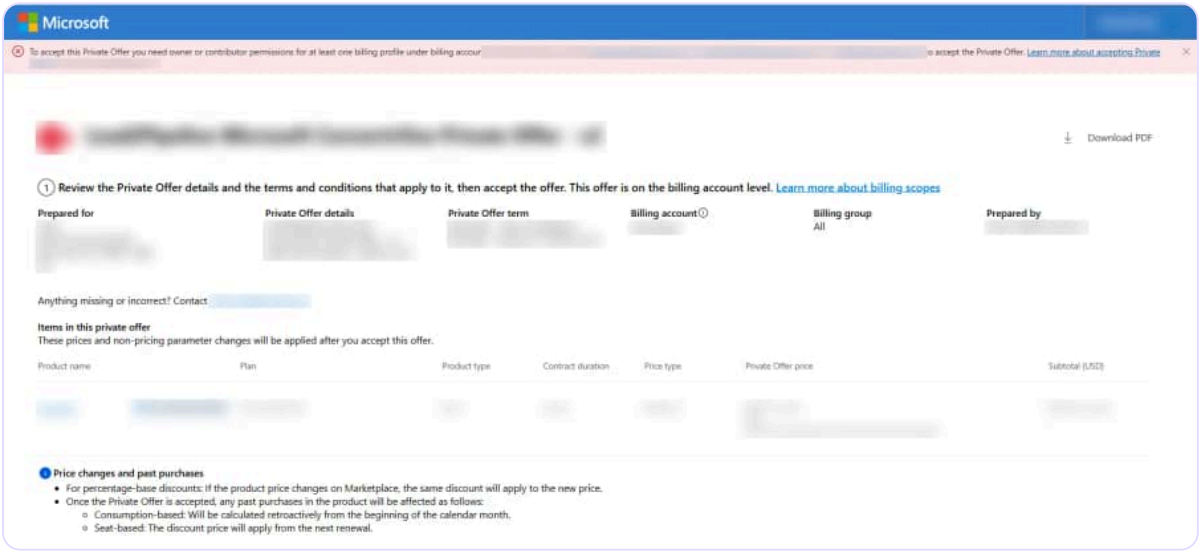

docs.wetransact.io/how-to-add-a-profile-as-the-billing-owner

Overview

When you open a Private Offer to accept it, you may see this error at the top of the page:

To accept this Private Offer you need owner or contributor permissions for at least one billing profile under billing account [your billing account].

This means the user accepting the offer is not an owner or contributor on any billing profile. To fix it, give that user the **Billing profile owner** role in the Azure portal, then accept the offer again.

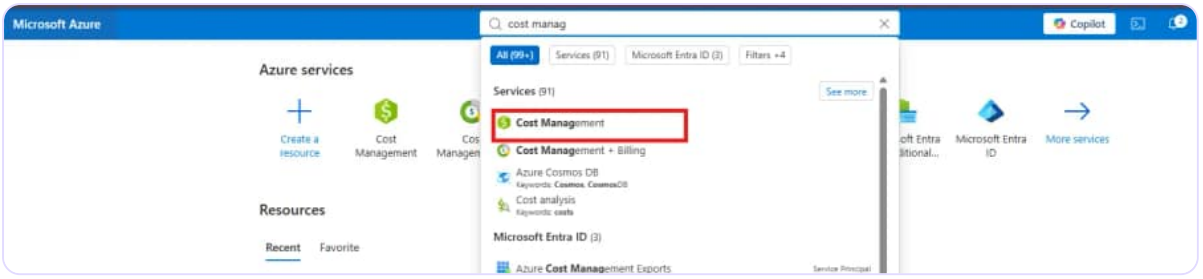

Before you start

- You need permission to manage access on the billing account or billing profile, for example as a billing account owner or an existing billing profile owner.
- Have the email address of the user you want to add ready.
- Know which billing profile you want to give them access to.

Steps

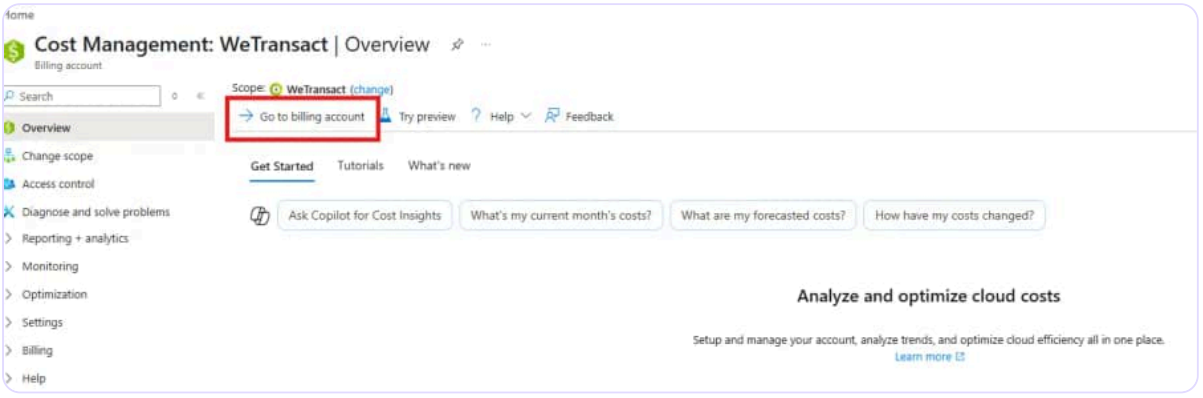

Step 1 – Open Cost Management

Sign in to the Azure portal. In the search bar at the top, type **cost management** and select **Cost Management** under **Services**.

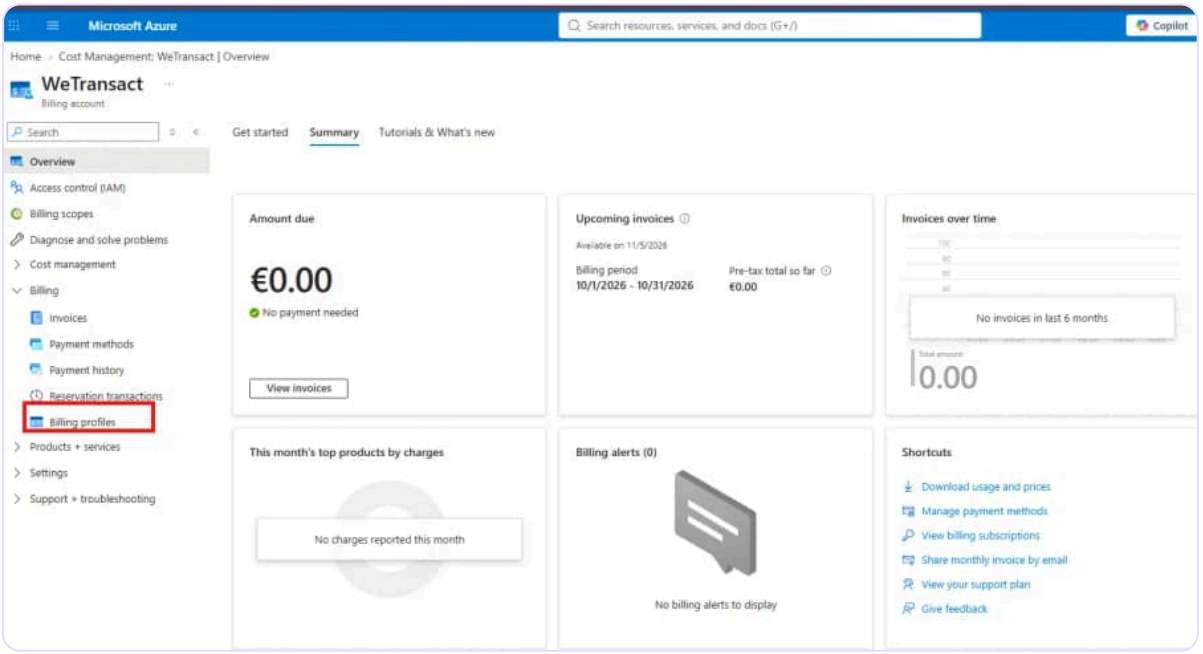

Step 2 – Go to your billing account

On the **Cost Management** overview page, click **Go to billing account**.

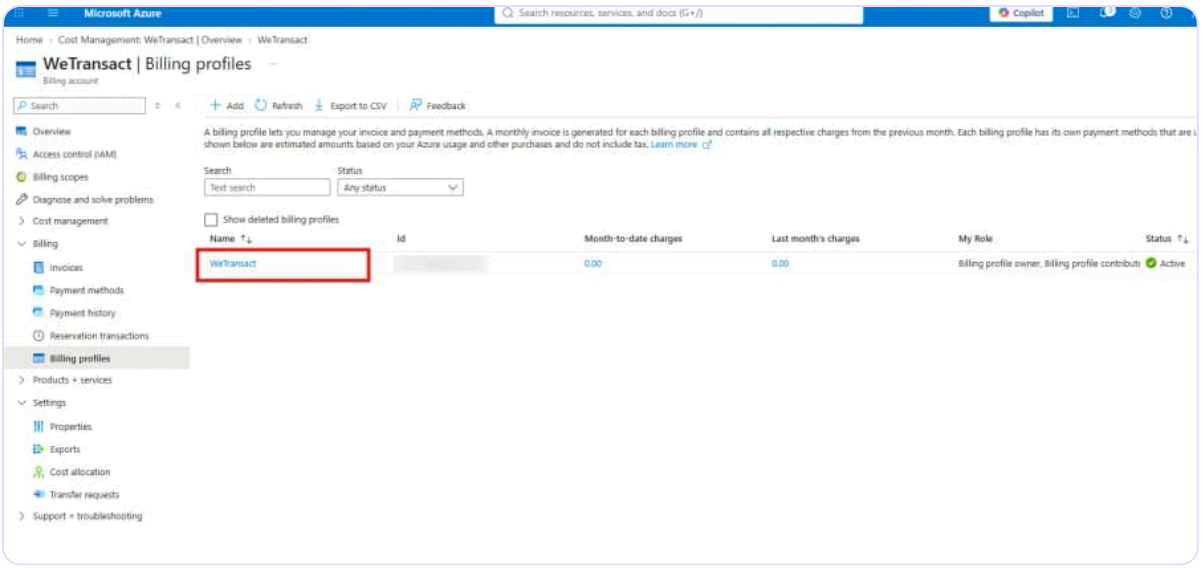

Step 3 – Open Billing profiles

In the left-hand menu, under **Billing**, click **Billing profiles**.

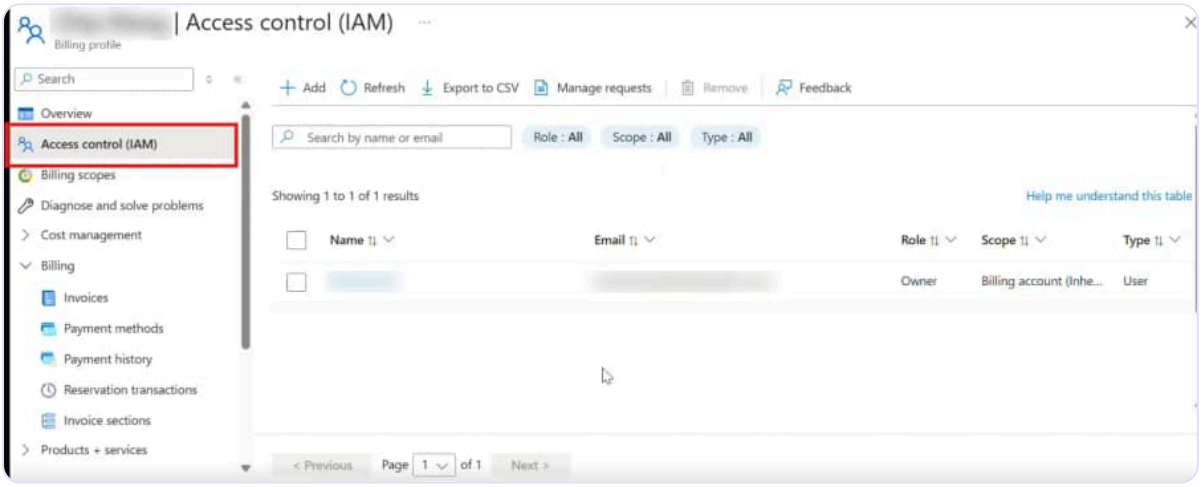

Step 4 – Select the billing profile

In the list, click the name of the billing profile you want to give access to.

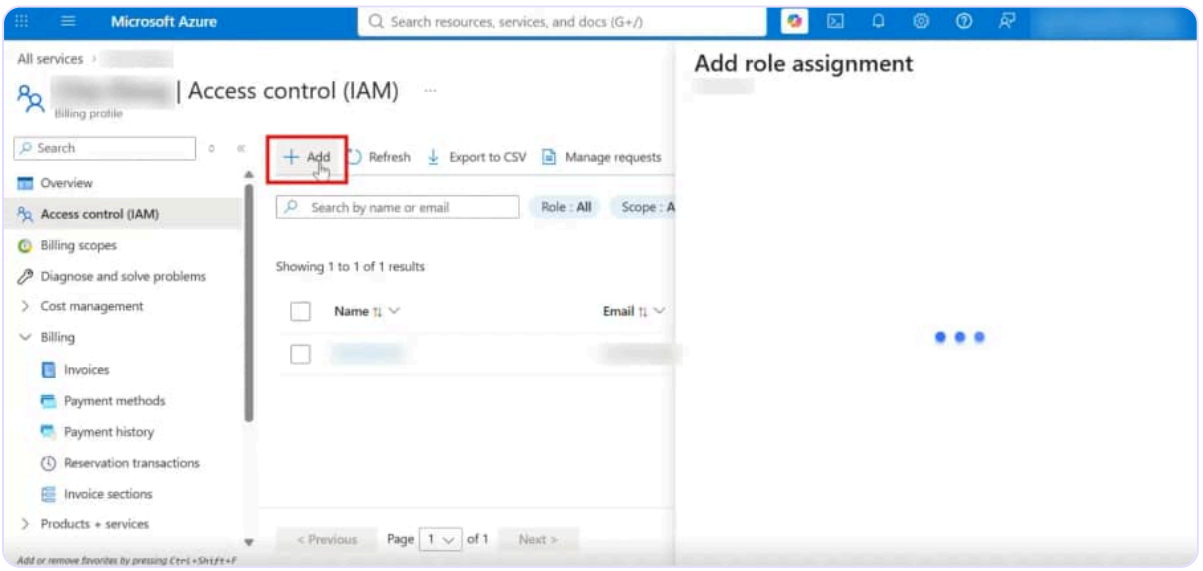

Step 5 – Open Access control (IAM)

In the billing profile's left-hand menu, click **Access control (IAM)**. You will see the users who already have access.

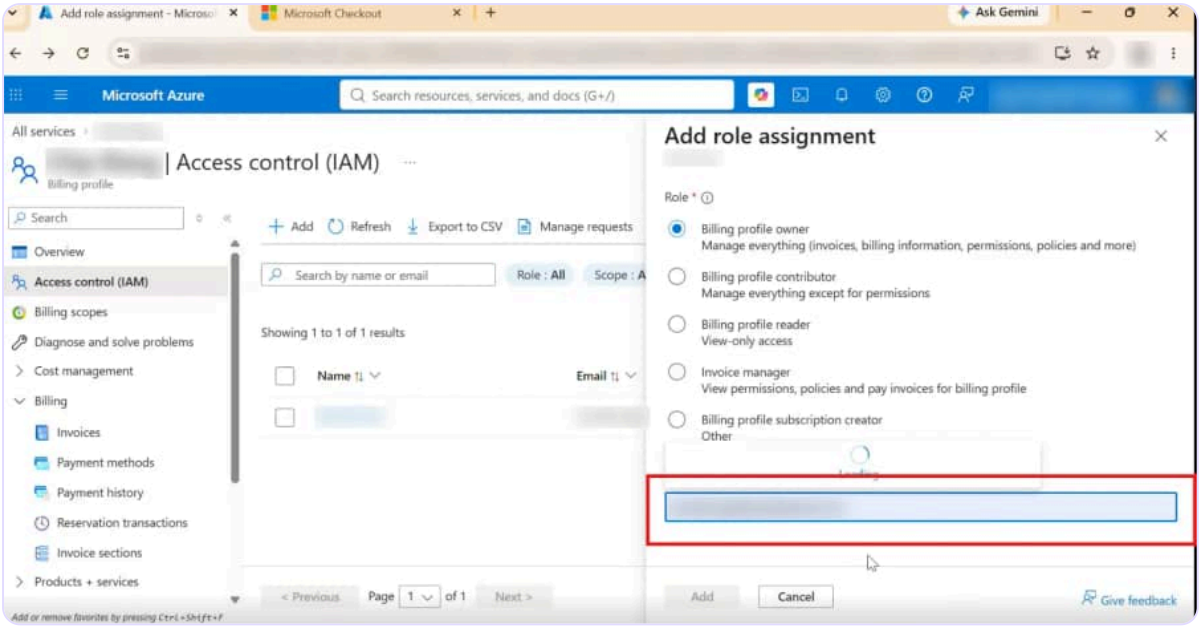

Step 6 – Add a role assignment

Click **+ Add**. The **Add role assignment** panel opens on the right.

Step 7 – Choose the role and the user

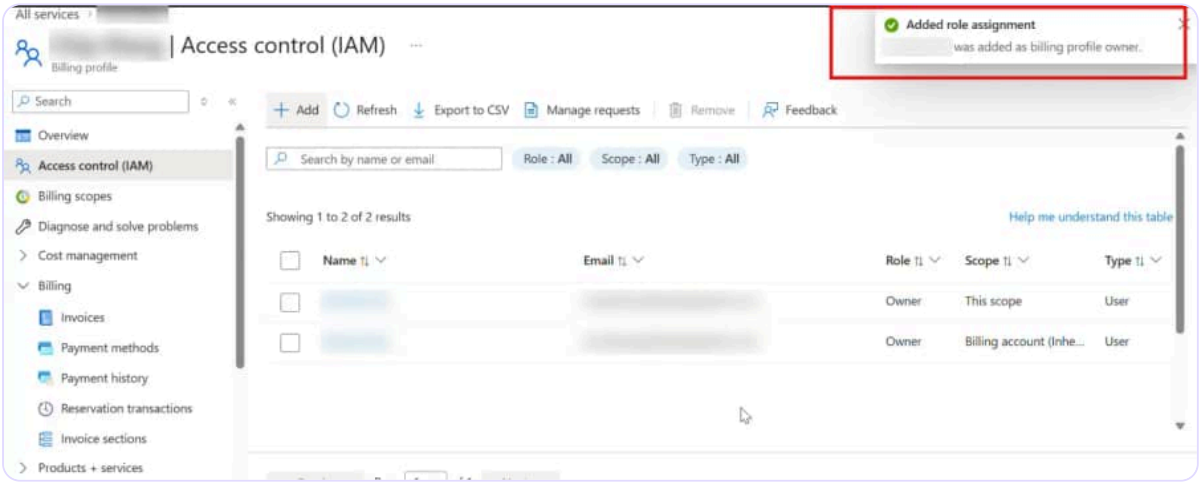

Under **Role**, select **Billing profile owner**. Enter the user's email address in the field below, select the user when they appear, then click **Add**.

Note: The **Add** button stays greyed out until the user has been found and selected.

Step 8 – Confirm the role was added

A message confirms **Added role assignment**. The user now appears in the list with the role **Owner** and the scope **This scope**.

Step 9 – Accept the Private Offer

Go back to the Private Offer link and refresh the page. The error should no longer appear, and you can accept the offer. For a step-by-step guide to accepting the offer, see How to accept a Private Offer – customer walkthrough.

Troubleshooting

- **"To accept this Private Offer you need owner or contributor permissions...":** the user accepting the offer has no owner or contributor role on a billing profile. Follow the steps above to add them as **a billing profile owner**.
- **The Add button is greyed out:** make sure you have selected a role and that the user's email has been found and selected.
