

CSP Private Offer

docs.wetransact.io/csp-private-offer

A CSP private offer is created by an ISV for a Cloud Solution Provider (CSP) partner instead of directly for the end customer. The CSP purchases through the marketplace at an agreed margin and resells your solution to its own customers.

This is the route to take when the customer buys through a reseller - including any customer whose subscription is CSP-managed, since those customers cannot accept private plans or direct private offers.

Key characteristics

- You negotiate with the **CSP partner**, not the end customer.
- The CSP purchases via the marketplace and resells to end customers.
- Designed for indirect and channel sales motions.
- Supports CSP business models that private plans do not support.
- Requires reseller configuration on your offer - authorised reseller list, margins and offer visibility.
- **Does not decrement the end customer's MACC.** If MACC drawdown is the priority, ask the customer to purchase through a separate MCA billing account and send a [Direct Private Offer](#) instead.

When to use one

Use a CSP private offer whenever a reseller is part of the deal, or when a prospect turns out to be CSP-managed and can't accept your [Private Plan](#). Weigh it against a resale-enabled offer - the comparison article below covers when each applies.

In this section

- [CSP private offer vs Resale Enabled Offer](#) - which channel model fits your deal
- [How to create a Private Offer to CSP](#) - step-by-step setup
